EXPERIMENT-07

Aim :

Comparison of two Files for forensics investigation by Compare IT software .

Here is the procedure and result for Experiment 7 (Comparison of Two Files for Forensics Investigation Using Compare It Software):

Procedure:

Install and open the **Compare It** software on your system.

Launch the Compare It tool. A window will appear asking you to select files for comparison.
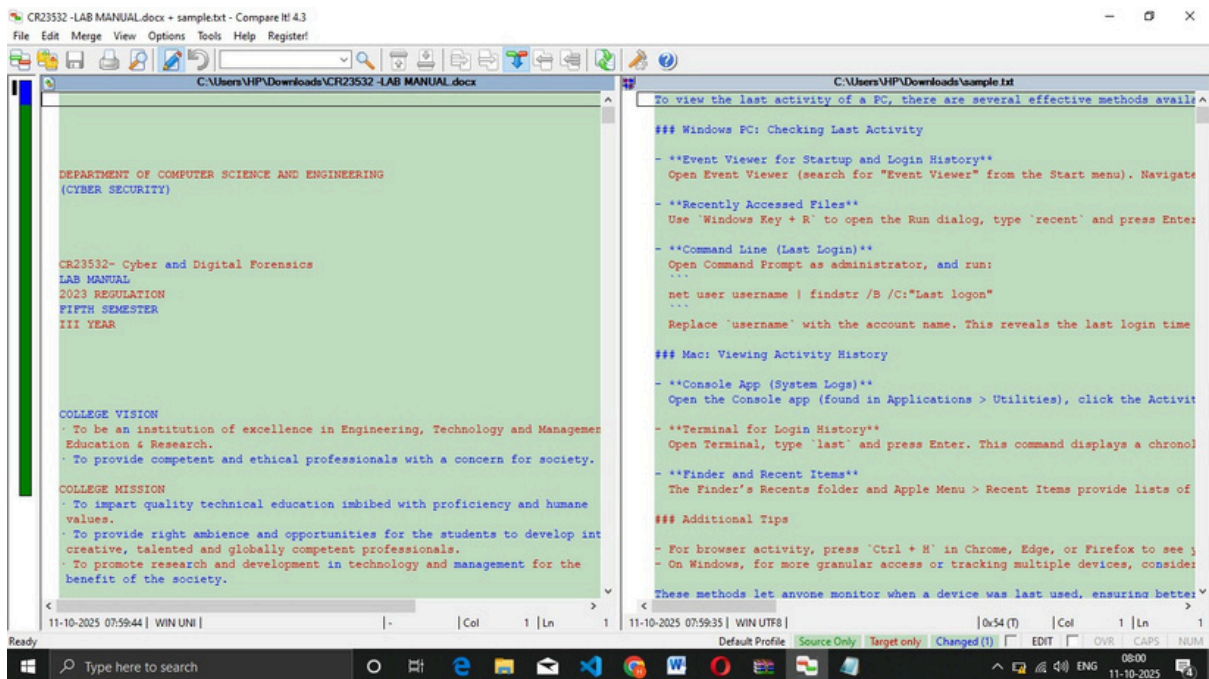

Click to select the first file to compare, then open it.

Next, select the second file to compare and open it.

The software displays both files side-by-side and highlights differences using color-coded sections.

You can navigate through the differences using the interface, and edit files directly if needed.

Compare It also supports creating and printing color-coded difference reports for documentation.

Result:

The software successfully identified and highlighted differences between the two files.

The side-by-side view with colored markings made it easy to locate changes.

The generated reports help document file differences, useful for forensic analysis and evidence presentation.
